Dr. Adrian Owen and the Owen Lab are conducting a study on how we think by getting children to **play fun computer games**.

If you are interested in participating by playing these games, visit:

and follow the instructions on the screen.

Dr. Adrian Owen and the Owen Lab are looking for volunteers to take part in a study looking at how children think, who meet the following criteria: Children aged 7 to 14 with normal hearing, normal to corrected-to-normal vision and English language fluency.

If you and your child are interested and agree to participate, your child would be asked to: complete 12 cognitive games on the computer that measure working memory, verbal ability, reasoning and attention. These tasks can be performed at home, on a computer, laptop or tablet.

Participation would involve 1 session, which will be about 45 minutes long.
